Assessment purpose

BANFF, CANADA 2014

The International School on Research Impact Assessment

Learning outcomes

- Be able to recall what RIA for analysis is
- Know when and where to apply an analysis approach to RIA
- Understand how RIA for analysis links to different types of assessment questions, methods and implementation approaches

When to use analysis approaches...

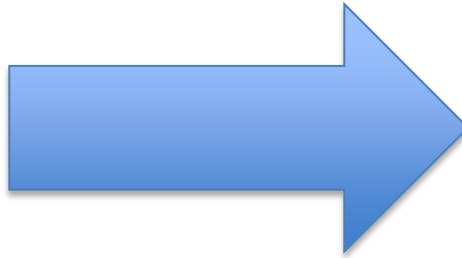

- Focusing on the 'how' as much as the 'what'
- Help funders:
 - Increase impact
 - Target particular outcomes
 - Support more of what works

BANFF, CANADA 2014

The International School on Research Impact Assessment

Research

Impact

What research characteristics are associated with impact?

What kinds and levels of impacts does research produce?

BANFF, CANADA 2014

The International School on Research Impact Assessment

Case Example: Mental Health Retrosight

3 year, 3 country study, driven and inspired by Tony Boeckh who lost his son Graham to schizophrenia.

Supported by multiple funders through the International Alliance of Mental Health Research Funders

Alliance of Mental Health Research Funders
Alliance d'organismes subventionnaires de la recherche en santé mentale

Fondation
Graham Boeckh
Foundation

National Institute
of Mental Health

CIHR IRSC
Canadian Institutes of Health Research
Instituts de recherche en santé du Canada

Past

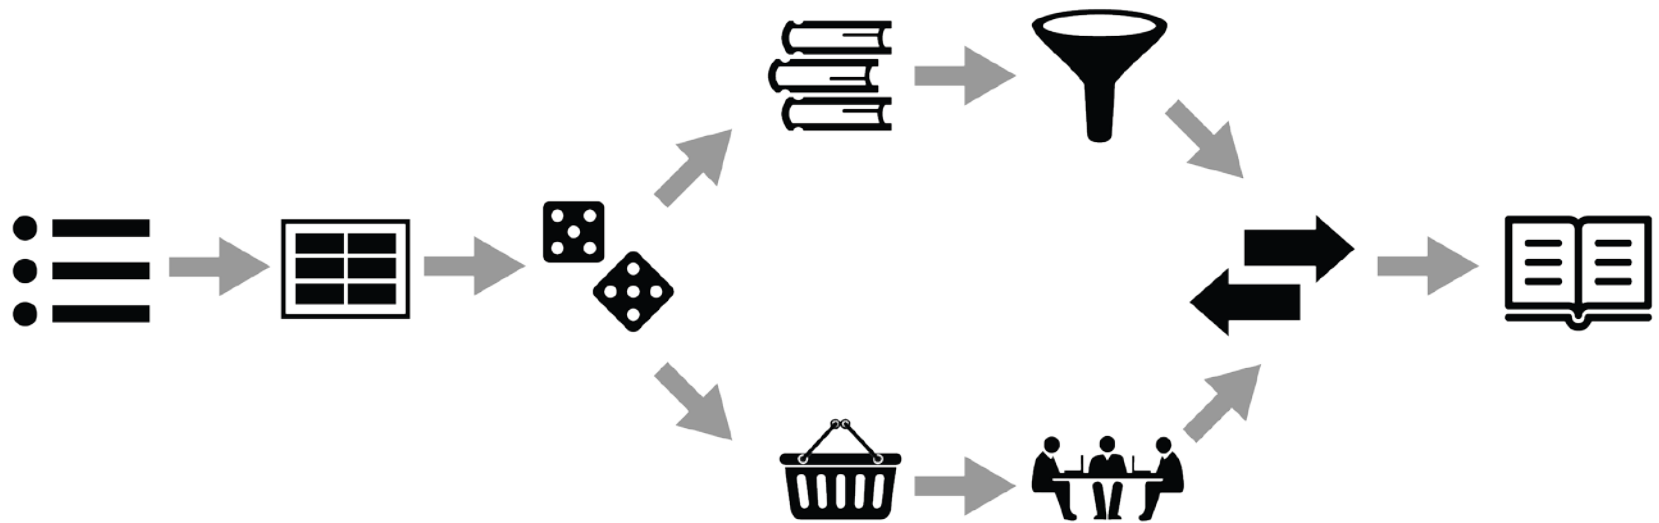

Present

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Arrows designed by Martin Chapman, Book designed by Tim Boelaars, Meeting designed by Julieta Felix, Basket designed by mathies janssen, Funnel designed by Patrick N, Stack of Books designed by Jeremy J Bristol – all from The Noun Project

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

List of highly cited papers

Papers published between 1985 and 1990 about schizophrenia

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Assign to cells in a selection matrix

	UK	US	Canada
Basic			
Clinical			

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Randomly select

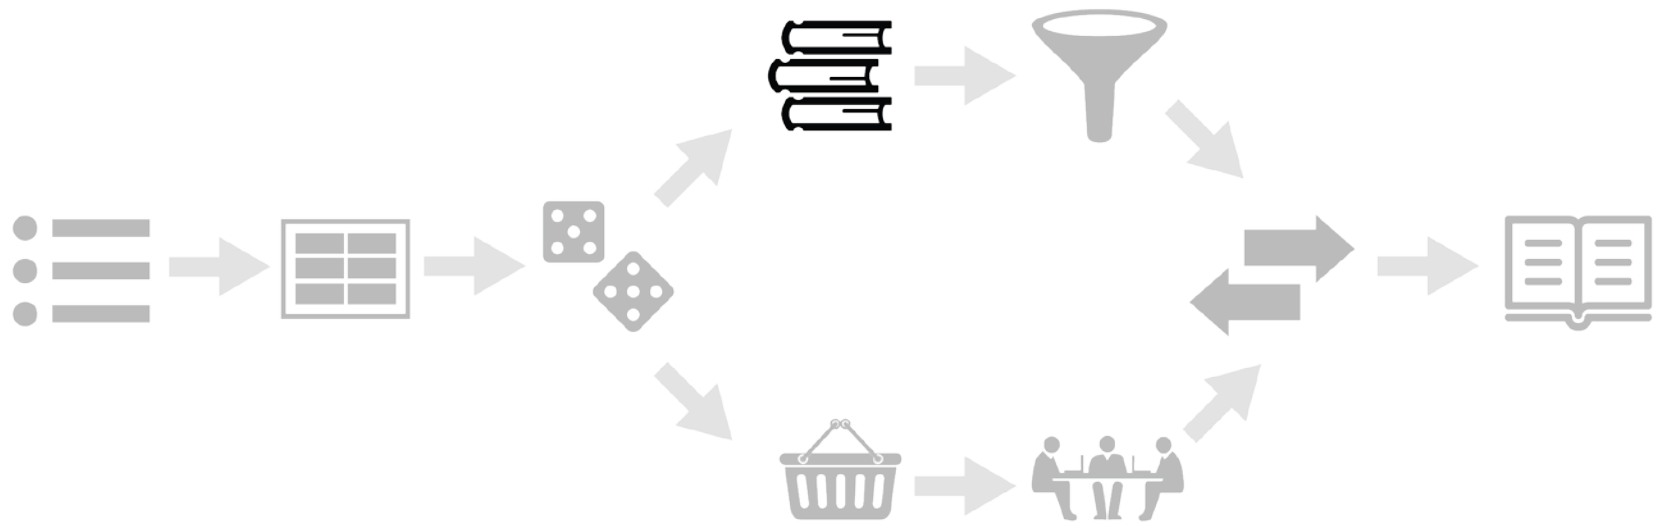

We randomly selected 18 papers

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Compile stories

We read publications, did bibliometrics, examined archives and interviewed Principal Investigators

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Multidimensional catalogue of impacts

- Knowledge production (KP)
- Research targeting and capacity building (RTCB)
- Information policy and product development (IPPD)
- Health and health sector benefit (HHBS)
- Broader economic benefit (BEB)

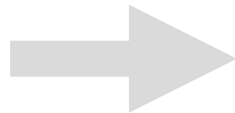

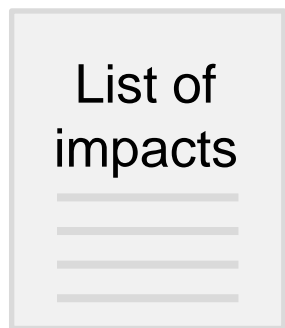

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Use panel to score impacts

Impacts	KP	RTCB	IPPD	HHSB	BEB
Payback scores	8	4	2	2	0

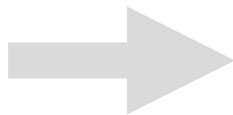

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Extract characteristics

Clinical motivation	Yes
Curiosity focussed	No
Spans stages of translation	No
Multidisciplinary	Yes

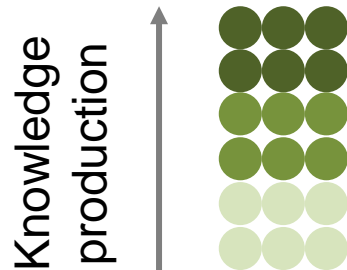

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

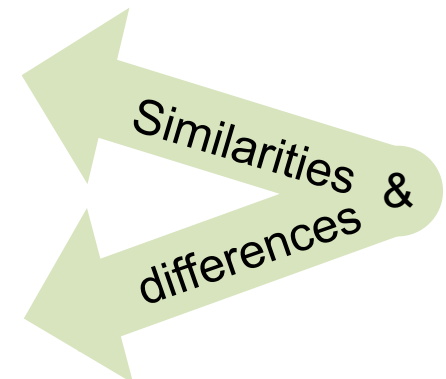

Examine similarities and differences

High impact 

Low impact 

BANFF, CANADA 2014

The International School on Research Impact Assessment

Mental Health Retrosight: Methods

Return to case narratives and existing literature to investigate strength of association

BANFF, CANADA 2014

The International School on Research Impact Assessment

A wide range of impacts was produced

BANFF, CANADA 2014

The International School on Research Impact Assessment

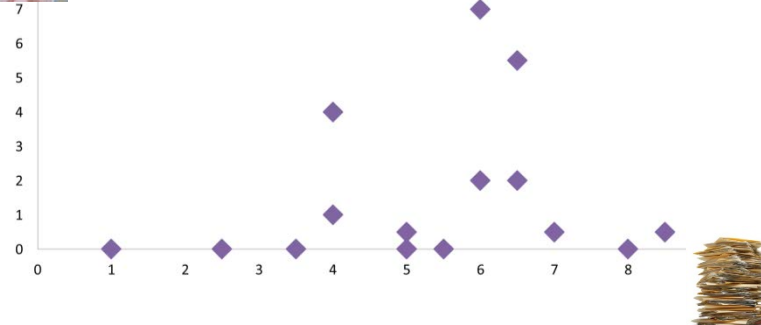

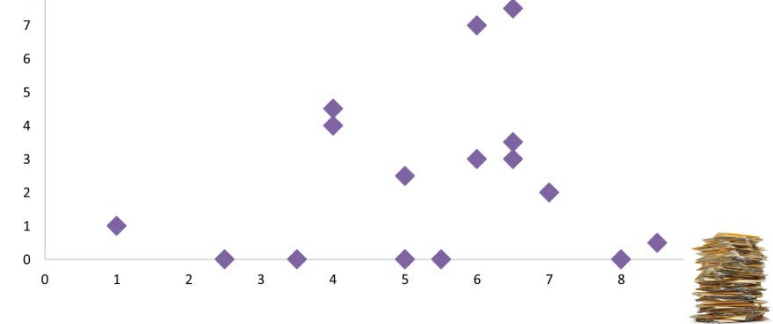

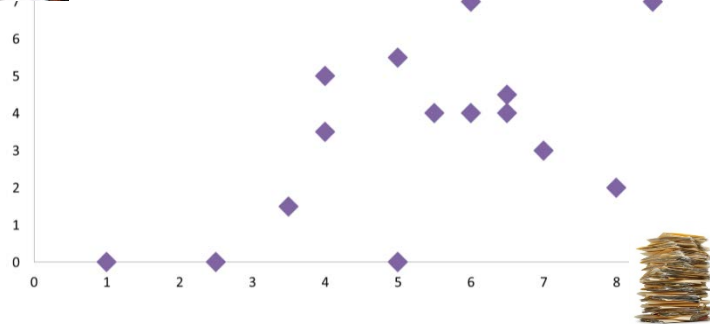

A wide range of impacts was produced

BANFF, CANADA 2014

The International School on Research Impact Assessment

Wider impact was not strongly correlated with knowledge production

BANFF, CANADA 2014

The International School on Research Impact Assessment

What type of research?

BANFF, CANADA 2014

The International School on Research Impact Assessment

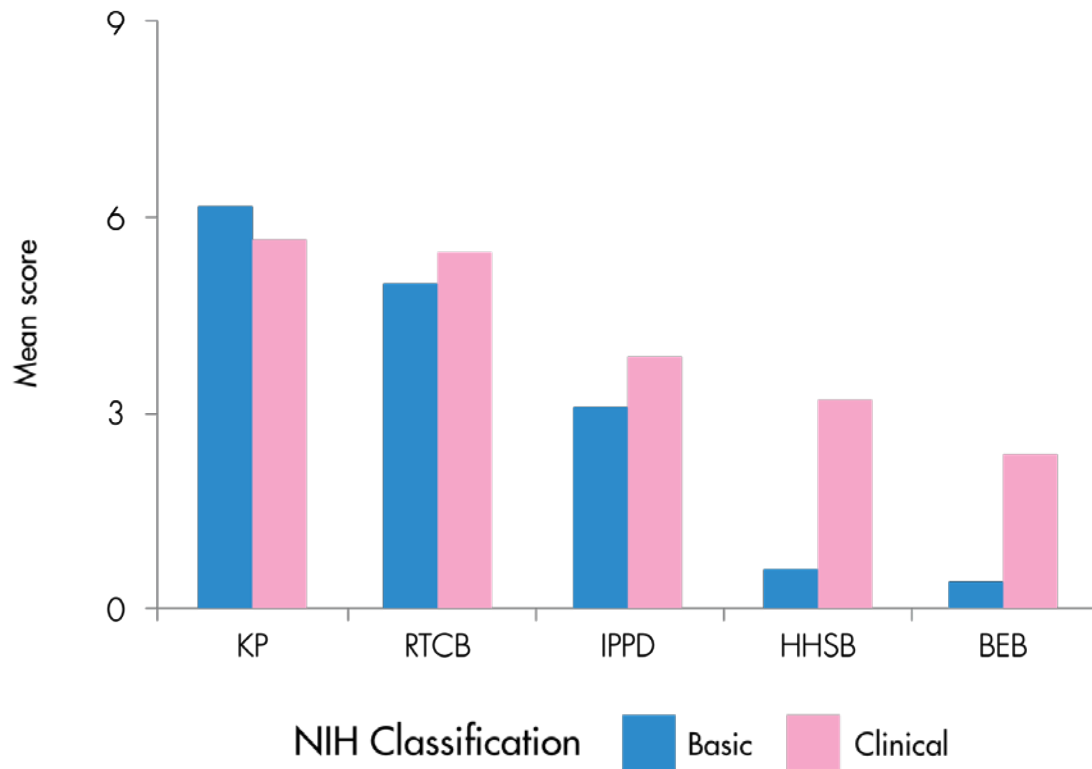

Basic or Clinical?

BANFF, CANADA 2014

The International School on Research Impact Assessment

The impacts of basic and clinical research

Caveats:

Does basic research have fewer, larger successes?

Does basic research have a larger eventual impact and hence is worth the wait?

Finding

Over 20 years, applied or clinical mental health research had had more health, social and economic impacts than basic mental health research

Provocation

Funders aiming to make a difference to patients within 20 years should focus on clinical research

Research Questions

Develop more nuanced classification of basic research and understand the different impacts of these types of research

Investigate the distribution of impacts across basic research

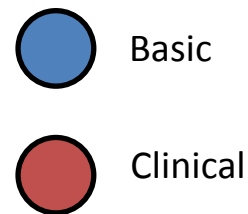

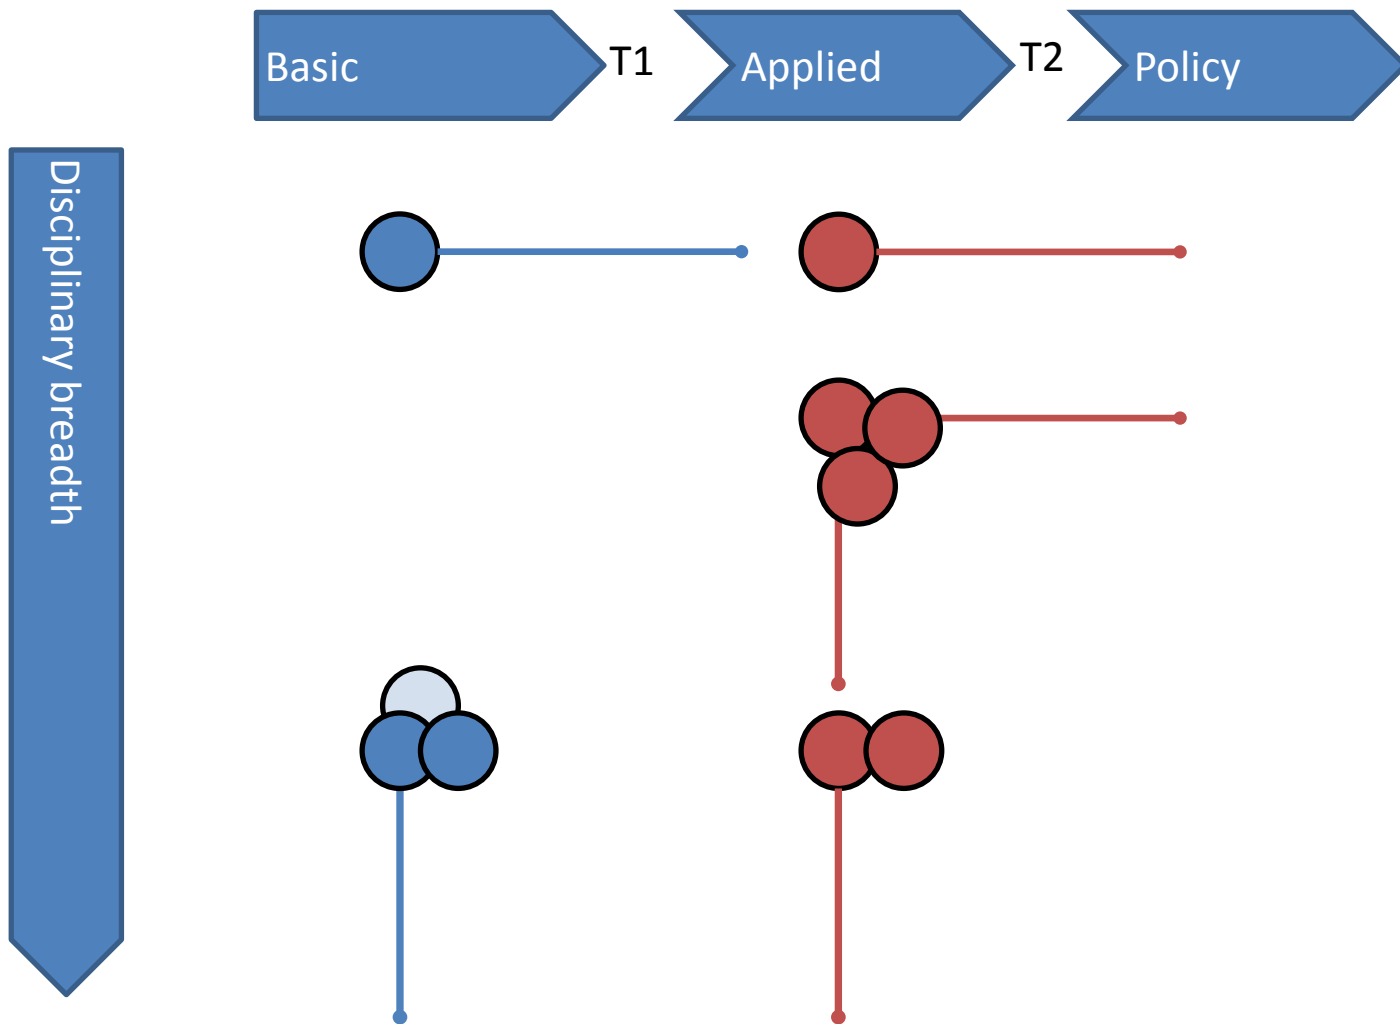

Focus or breadth?

BANFF, CANADA 2014

The International School on Research Impact Assessment

10 case studies were coded for some form of 'integration'; 1/10 in low impact categories indicated in translucence

Finding

Mental health research resulting in an academic, health, social or economic impact is associated with researchers who work across boundaries by spanning a translational pathway or more than one discipline

Policy Provocation

Support individuals who work across boundaries – both disciplinary and translation stages possibly through flexible funding

Develop opportunities for networking across boundaries

Research Question

Boundary spanning potential of researchers – can you teach it or do you have to grow it?

Is motivation important?

BANFF, CANADA 2014

The International School on Research Impact Assessment

Finding

Committed individuals, motivated by patient need, who effectively champion research agendas and/or translation into practice are key in driving the development and implementation of interventions

**Motivated by
patient need**

Vs

**Motivation was
curiosity focused**

“I couldn’t have done any of this research if I didn’t see patients, because I had this corpus of learning that had been given me and then I saw the people who I was working with and these things did not compute... they weren’t the same thing.”

Interview with scientist

BANFF, CANADA 2014

The International School on Research Impact Assessment

Finding

Committed individuals, motivated by patient need, who effectively champion research agendas and/or translation into practice are key in driving the development and implementation of interventions

Policy Provocation

Identify and support researchers who are motivated by patient need

Research Questions

Unpick the role of motivation in driving the impact of researchers and research teams

Investigate ways to inspire researchers to pursue patient needs

In summary...

- Research funders can expect a range of impacts from mental health research
- They should not assume that knowledge production will predict wider impact, although there may be a stronger link than in some other areas
- Research funders should encourage and support:
 - Clinical/applied research if looking for patient benefit within 20 years
 - Researchers who work across boundaries
 - Researchers motivated by patient need who champion a particular area

Key messages

Research

Impact

What research characteristics are associated with impact?

What kinds and levels of impacts does research produce?

- RIA for analysis can help us understand the research translation process
- This knowledge can then be used to increase impact
